

**STOP** Sorry.  
This server is currently unavailable.  
Please try again later.  
OK

**STOP** The server is still too busy to respond.  
Unless it broke down.  
Again.  
Perhaps tomorrow.  
OK

**STOP** Your repeated attempts to connect  
are beginning to make the server cross.  
Please go away.  
OK

**STOP** Back again?  
What are you, some kind of rejection junkie?  
This server is still unavailable,  
and undoubtedly will remain so for the  
foreseeable future.  
OK

**STOP** You can bang the keyboard 'til you're  
blue in the face, but this server just isn't  
going to have time for you.  
Not now. Not ever. Get over it.  
OK

If the purpose of your Internet site is to annoy as many people as possible, most any server will do. However, if you'd like to offer access instead of agita, try running on an Internet Alphaserver System. The 64-bit speed of Alpha makes other servers look like *sluggish@sloth.slo*. So your site handles huge volumes of visitors, instead of turning them away. Redundant power supplies and

## OBVIOUSLY, THIS WEBSITE ISN'T RUNNING ON AN **ALPHASERVER**

hot-swappable storage are standard. Translation: your site stays open for business, not down for maintenance. You get superb scalability, for future expansion. A full suite of Internet software, with powerful administration tools. A choice of three pre-configured models. And something no other 64-bit RISC server offers: Windows NT or Unix, whichever you prefer. To see the Internet Alphaserver
