

# ProSentry™

INTERNET SECURITY MONITORING

### Are you vulnerable?

- How would you know if your web site was broken into?
- How do you detect vandalism, changes, and outages to your business critical Internet servers?
- How do you double check the work of your security team or the security vendor you outsource to?
- Most companies do not know what and where their key assets and vulnerabilities are. Do you?

### The big picture

ProSentry provides an up-to-date and unified view of your global Internet perimeter and your security posture

ProSentry provides proactive detection and management features to reduce business risk and increase the effectiveness of your IT staff

Our comprehensive suite of integrity monitoring modules protect your Web infrastructure investment by ensuring your servers are secure, available, and serving appropriate content at all times

The dashboard provides easy, one-click access to reports and historical information

*"IT Managers today must exercise prudent steps in protecting their corporations from all types of incidents. It is critical that they minimize the business risk around the corporation's infrastructure.*

*The end result of the ProSentry solution is an operationally sound approach to securing our Internet perimeter that is based on industry-accepted best practices.*

*ProSentry can be added to the corporate infrastructure with no capital investment. It is also implemented without necessitating changes to that infrastructure. The implementation is flexible, powerful, and fast -- up and running within an hour, the dream of IT Managers."*

**Bill Maguire**  
Chief Information Officer  
Legato Systems

### We automate paying attention™

ProSentry™ 2.0 is an automated security management service that scans your Internet infrastructure for security vulnerabilities, and monitors both the integrity and availability of your Internet servers. ProSentry 2.0 performs network reconnaissance and evaluates targets as a hacker would, then continues to monitor your servers as you mitigate risks and respond to incidents. ProSentry 2.0 provides an organization with a comprehensive view of the security intelligence needed to secure and manage its systems using a non-invasive, subscription service.

### Internet security: Are you doing enough?

Network security is a sensitive subject for CIOs and network managers alike, especially now with so much vital company information being stored and exchanged electronically. The inability to control this information poses a real threat to businesses of all sizes and types. The world has become increasingly information-centric and dependent on the network, the potential for loss is greater and the need for additional security is magnified.

Did you know that many companies are failing to secure their infrastructure and are falling drastically behind emerging security trends? Is your company at risk?

- 99% of all reported intrusions in 2001 were preventable using available mitigations and counter measures (source: Carnegie Mellon Software Engineering Institute)
- 27% of companies report that they do not know how many incidents they experienced in 2001 (source: 2002 CSI/FBI Computer Crime & Security Survey)
- Hackers automate the scanning and selection of targets based on the existence of a specific vulnerability, not based on the size or identity of the company

### Why ProSentry 2.0?

Our ProSentry 2.0 Internet Security Monitoring service was built on industry-accepted techniques and technologies that are widely used to help leading companies secure their infrastructure and keep it secure. ProSentry 2.0 takes automated security management to a new level by unifying these techniques and technologies into a single service and providing the workflow and reporting necessary to effectively get secure and stay secure.

Prevention is ideal, but detection is a must. ProSentry 2.0 helps prevent hackers from compromising your systems by helping you clearly understand and effectively manage your security posture. ProSentry 2.0 also improves your incident response time by quickly detecting and alerting you to suspicious changes and unexpected outages. Our ProSentry 2.0 service reflects our many years of hands-on experience successfully protecting one of the largest federal agencies in the United States.

### The ProSentry 2.0 advantage

There are many compelling reasons for companies to consider the ProSentry 2.0 subscription security monitoring service:

#### No expensive infrastructure

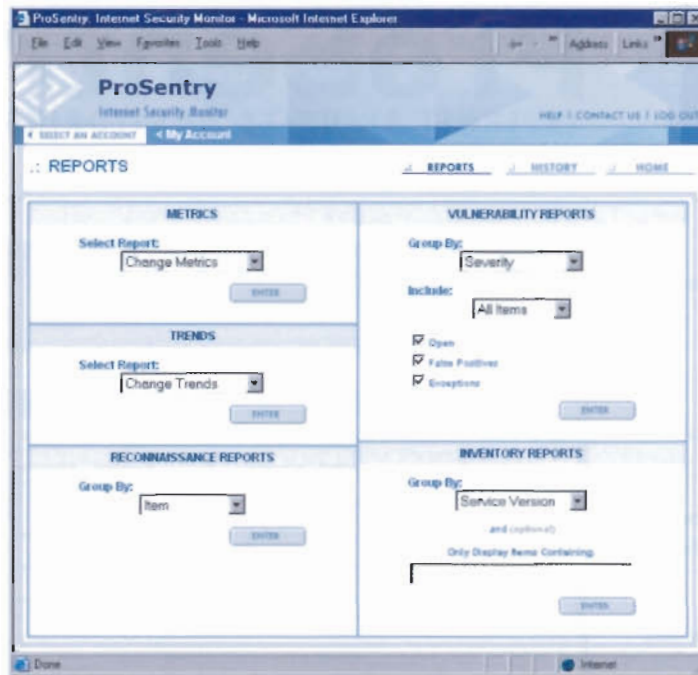

- No purchasing, installation, or maintenance of software and hardware
- Pay as you grow - pay only for what you need, when you need it
- Save on manpower, technical staff, and technical training

#### No hassle

- Single source - no need to string together multiple products and tools
- Start using ProSentry right away - we have the expertise to get you up and running quickly and effectively
- Easy to learn, easy to use
- Customizable to meet your business requirements

#### Stay focused

- Concentrate on broader core business issues, while our security experts assume the operational monitoring details
- Empower your existing staff with better, timely security intelligence

#### Real-time reporting

ProSentry reports provide your organization with instant access to metrics information, trend analysis, network reconnaissance, vulnerability reports, and inventory reports

Your staff will no longer have to spend hours running tools and integrating results in order to effectively report on your security posture - ProSentry does it all for them

Robust workflow enables any number of people to effectively collaborate and respond to security issues, and user scheduling ensures that the right people are promptly notified about problems

*"We realized early on that running vulnerability scans alone was not enough to keep our Internet systems secure. ProSentry was the only practical approach to detecting and managing security vulnerabilities, integrity problems, and system outages, without having to hire a huge security team and without buying products from multiple vendors."*
